

MUHAMMAD OSAMA

React Native Developer

+923408414263 | osamairtaza1916@gmail.com | linkedin.com/in/osama-irtaza-b54 | Rawalpindi, Pakistan

PROFESSIONAL SUMMARY

Results-driven React Native Developer with 2+ years of professional experience building cross-platform mobile applications for iOS and Android. Proven track record delivering production-grade apps with real-time features (WebSockets), Google Maps integration, Firebase services, and multilingual (Arabic/English) support with RTL layouts. Passionate about clean code architecture, Redux Toolkit state management, and smooth UI/UX. Seeking a challenging role to contribute to impactful mobile products.

EXPERIENCE

React Native Developer | En Route Technologies

Jun 2024 – Present • Rawalpindi

- Develop and maintain cross-platform mobile applications using React Native and TypeScript
- Implement real-time features using WebSockets for live data updates and vehicle tracking
- Integrate Google Maps SDK for interactive maps, route polylines, and location-based services
- Manage application state with Redux Toolkit; handle complex async flows with middleware
- Integrate Firebase services including Firestore, FCM push notifications, and Authentication
- Implement multilingual support (Arabic/English) with full RTL layout switching
- Collaborate with backend teams to design and consume RESTful APIs and GraphQL endpoints
- Follow best practices in code structure, component reusability, and performance optimization

Web Developer (Intern) | Web Care House

Jun 2022 – Aug 2022 • Kashmir

- Built responsive web pages using HTML, CSS, and JavaScript
- Developed interactive UI features and applied front-end best practices

TECHNICAL SKILLS

React Native	TypeScript	JavaScript	Redux Toolkit
Hooks	Context API	WebSockets	REST API
Firebase	FCM	Google Maps SDK	GraphQL
Git	Postman	HTML	CSS

PROJECTS

MobilityX / Riyadh Air — Shuttle Booking Platform — Dubai Market (iOS & Android)

- Built a full-featured shuttle booking platform for the Dubai market using React Native and TypeScript
- Implemented real-time vehicle tracking via WebSockets, displaying live driver locations on Google Maps with road polylines and route optimization
- Developed complete booking lifecycle: seat selection, luggage management, booking creation/editing/cancellation, and ride history
- Integrated Firebase push notifications (FCM) for ride updates and driver assignment alerts
- Delivered full Arabic/English language support with RTL layout, light/dark theme, and user profile management
- Coordinated with backend API for route management, dynamic pricing, and passenger–driver coordination

NavGo — Ride-Hailing App (iOS & Android)

- Developed a cross-platform ride-hailing app using React Native and TypeScript with Google Maps integration for destination selection and provider discovery

- Implemented authentication, ride booking, ride history, favourites, feedback, Invite & Earn, and Redemption Partners features
- Managed app-wide state with Redux Toolkit; ensured offline handling and smooth UI/UX throughout
- Delivered full Arabic/English i18n support with RTL layout and responsive design for both platforms

Sianty — *Garage Management System*

- Built a garage management system enabling service centres to create and manage estimates, job cards, and work orders for vehicles
- Implemented vehicle intake workflow, parts and labour costing, and work order status tracking
- Designed an intuitive mobile interface for technicians and service advisors to manage daily workshop operations efficiently

Fleet Management — *Vehicle Tracking Platform*

- Built a real-time fleet tracking application enabling clients to monitor vehicle locations, track fuel efficiency, and manage subscription-based alerts
- Integrated live map views and alert configuration for fleet administrators

RideLinker — *Ride-Booking Platform*

- Developed a ride-booking app supporting scheduled, instant, and shared ride types with driver tip management and payment processing
- Implemented driver–passenger interaction flows, booking management, and transaction security features

Skin Mentor — *AI-Powered Skincare App (Final Year Project)*

- Integrated deep learning models to detect skin diseases from user-uploaded images with preliminary diagnostic results
- Built an e-commerce module for skincare products and video consultation booking with doctors

SEO Automation Tool — *AI Content Generation*

- Built an AI-driven tool using React Native and Firebase to generate SEO-optimised blog content automatically
- Integrated real-time data storage, user authentication, and AI model APIs for content management

EDUCATION

Bachelor of Science — Software Engineering | **COMSATS University Islamabad**

2020 – 2024 • Islamabad
